

FOUNDER SUCCESS PATTERN SUMMARY

The analysis of Shark Tank India presenter data shows that male presenters account for the largest share, with 1,147 presenters, followed by 429 female presenters and 3 transgender presenters. The dataset contains 1,579 presenter records and records 434 accepted offers out of 789 pitches.

The findings indicate that male presenters form the largest presenter group in the dataset, while female presenters also represent a significant share. Transgender presenters represent a very small proportion of the available records. The accepted-offer analysis shows that 434 pitches received accepted offers, providing an overall indication of deal success in the dataset.

These findings describe patterns in the available presenter and deal data. They should not be interpreted as evidence that presenter gender causes startup success, because the dataset does not contain individual founder names or sufficient information to establish causation.
